

## IPS-2424 Programmable Input Switch Module

### Description:

The IPS-2424 Programmable Input Switch Module, which provides 24 programmable switches complete with bi-colored LEDs and slide-in labels, can be configured for auxiliary functions such as zone by-pass or added common control functions. In a zone bypass configuration, a group of addressable devices or hardwired circuits can be assigned to a programmable switch and when the switch is operated, those devices or zones are by-passed. The switches operate in an alternating toggle operation for on and off. There are two LEDs for each switch; one for selection, the other is bi-colored to indicate point status when the switch is returned to normal (unbypassed) position. The bi-colored LED will flash red to indicate an alarm or it will flash amber to indicate that a trouble alarm will be processed when the switch is returned to normal (unbypassed) position.

The IPS-2424 can be connected to the main panel or it can be connected to the RAX-LCD Remote Shared Display if unique programmable input switches are required for a specific location. The IPS-2424 takes up two frames when connected to the main or remote shared display. The IPS-2424 occupies one display position in the BB-1000 or BB-5000 enclosures.

IPS-2424

### Features:

- **24 Programmable Switches**
- **24 Bi-Colored LEDs and 24 Amber LEDs**
- **Can be connected to the main panel or RAX-LCD if unique programmable input switches are required for a specific location**
- **Slide-In Paper Labels included for zone labeling purposes**
- **Switched operate in a toggle operation**

## Specifications:

Standby:  
10mA

Alarm:  
144mA

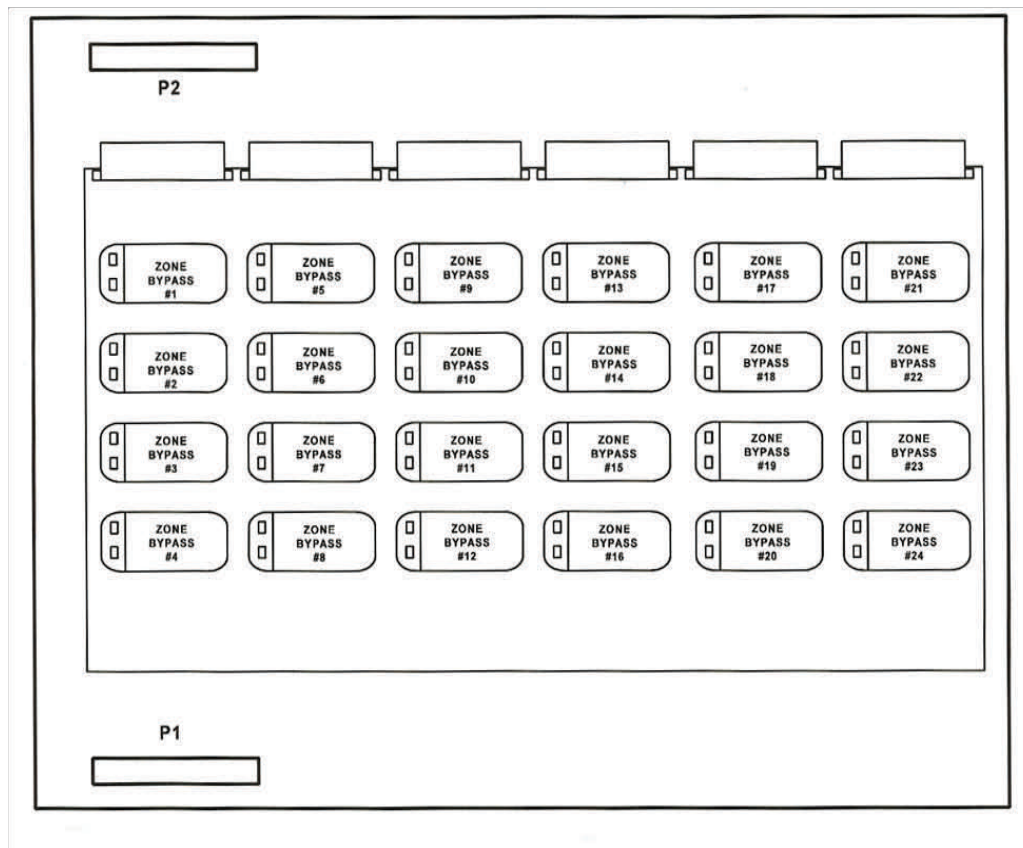

P1: Cable connects to P2 of previous Display Module

P2: Cable connects to P1 of next Display Module

Note: The Display Module comes with Laser Printer compatible **Slide-In Paper Labels** for Zone labeling purposes. This module is used for group bypass.
