ELECTRONIC MASTER BOX TECHNICAL BULLETIN 04

Computer Com Port settings for programming the transmitter using Windows XP

Programming the Transmitter is MS-DOS and therefore the computer must have a Microsoft Operating System.

Programming always works well when using a Laptop or PC with a serial port. When using a USB to Serial adapter it seems that the adapters that work are the ones that come with the driver software to install on the computer. We recommend the StarTech, 1 Port USB to Serial SR232 Adapter Cable with COM Retention, Part # 1CUSB2321F. The website is StarTech.com

For serial port set up go to My Computer, Control Panel, System, Hardware, Device Manager, Ports (COM & LPT), Communications Port (Com 1), Port Settings. Make sure port settings are set as follows:

Bits Per Second 4800 Data Bits 8

Parity None Stop Bits 1

Flow Control None

Click on Advanced and adjust the buffers to mid-range

For additional technical support please contact the manufacturer as follows.
